The Heat is On

INTRODUCING HEATWAVE™

HIGH TEMPERATURE WHEELS AND CASTERS

HEATWAVE

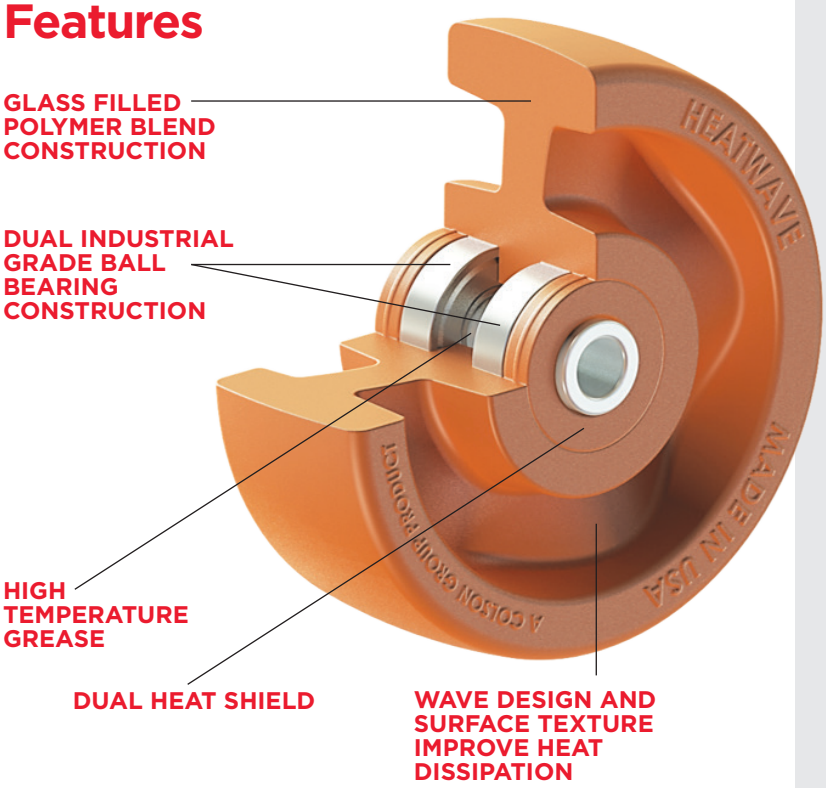
4" x 1½"
High Temperature Wheels and Casters

When the Heat is On, Performance Rises

Meet the Heatwave™ wheel—engineered to raise the bar. Built to outperform and outlast, it delivers next-level durability for demanding operations. Made in the USA, Heatwave offers exceptional heat resistance and heat dissipation—so you get uncompromising performance.

MADE IN USA

Features

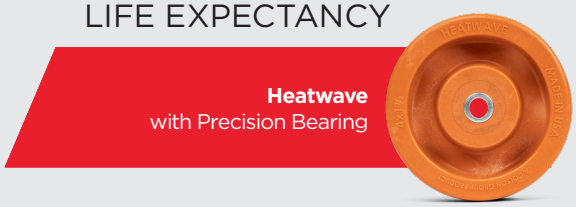


TEMPERATURE RANGE: -20°F to 475°F
INTERMITTENT TEMPERATURE: 525°F
AVAILABLE DUROMETER: 85 SHORE D
WHEEL DIAMETER: 4"
TREAD WIDTH: 1½"
TREAD PROFILE: Flat

The Results Are In

Cycles to Failure

MORE THAN **2X**[1] LIFE EXPECTANCY



Abrasion Resistance Testing

2.9X[2] HIGHER RESISTANCE TO ABRASION COMPARED TO EPOXY RESIN WHEEL

1 Dynamic life comparative tests conducted to replicate field use in a Colson Group test facility. For one test cycle, products were heated to 475°F for one hour time, allowed to cool to room temperature, then durability tested with 300 lb load for 320m. Product was then removed from test and inspected. If there were no wheel failures, the product test cycles were repeated until failure. Heatwave wheel did not fail during testing and after exceeding competitive product life by 2X cycles. Test for Heatwave wheels were ended after exceeding 180 cycles without failure. Testing at other facilities may vary due to equipment and flooring variables. Premium Colson Group rigs were used in all tests to ensure proper controls were in place. 2 Abrasion Resistance comparison test performed in accordance to ASTM D5963, and ISO 4649 in a Colson Group test facility. Samples of the same size of Epoxy and Heatwave wheels were tested, Epoxy resin measured 654 cubic centimeters of material loss. Heatwave wheel measured 225 cubic centimeters of material loss.

Applications

- Professional Bakeries
- Commercial Kitchens
- Food Manufacturing & Processing
- Powder Coating
